

Environmental Policy

Our company

LUX Assure Ltd. is an innovative technology company.

Our business model focuses on developing new technology for the oil and gas industry, in collaboration with operators and service companies, working with them to develop, test, and commercialise products.

LUX specialises in delivering robust, highly sensitive, and simple to use chemical monitoring technologies for both offshore and onshore use.

Our products include technologies for monitoring corrosion and hydrate inhibitors in oilfield fluids.

These products have a positive global environmental benefit, as they enable optimisation of chemical use, which may reduce the amount required.

LUX Assure acknowledges that what we do will have an environmental impact, however this is mitigated by having a documented and established Environmental Management system in place, which is implemented to ensure compliance with the requirements of ISO 14001:2004.

Implementation

Specific measurable environmental objectives and targets are set by management, and communicated to all employees. These are subject to review during Management Review Meetings.

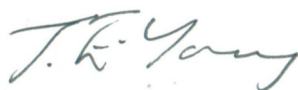

We are committed to the prevention of pollution, and actively monitor our environmental performance through a programme of continual improvement.

We are committed to complying with all legal and other requirements associated with our operations. These are subject to regular review, and updated where necessary.

We educate our employees on their safety and environmental responsibilities.

Compliance with this Environmental Management System is mandatory for all employees of LUX Assure Ltd.
